

OFF-TREE ROUTES — REACHABLE FROM FOOTER OR HEADER, NOT IN THE NAV DROPDOWNS

LOCALE SCHEME

Locale is the first path segment — `/zh/about/history` and `/en/about/history`. `/` redirects to `/zh`. Route segments stay English in both locales, so no percent-encoded Chinese URLs. The switcher swaps only the locale segment and keeps the rest of the path.

NAV TAXONOMY — RESOLVED

The deck's footer filed 伙伴故事 and 星威论坛 under 华商社群; the header filed them under 中新合作走廊 and 企业合作. This diagram adopts the header taxonomy as canonical — it matches the URL tree. 华商社群 becomes a footer heading, not a page.

PHASE SPLIT

Everything in white and navy ships in the Phase 1 demo, early October. The green forum cluster is Phase 2, around December. Auth routes are built in Phase 1 so the header links aren't dead, but gate nothing until the forum exists.
